The Best Trees for Colorado's Front Range | Donovan Arborists

Biorational disease control products (fungicides, bactericides, and nematocides) fall into the same classes as the insecticides, botanicals, minerals, and synthetics. Sulfur, potassium bicarbonate, phosphites and copper compounds are examples of minerals or synthetics that can control fungal and bacterial diseases. Many of these materials have a restricted use designation by

Intermountain Tree Fruit Production Guide

Large Shade Trees. These trees can grow to over 50 feet tall and nearly as wide, so bear that in mind when planning your landscape. Several species are drought tolerant, so are good choices for high, windy locations that don't get supplemental irrigation. Many large shade trees do well on the Front Range including: American Linden; Black walnut

Pesticides vary in their toxicity and in their potential ecological impact. Pest control materials that are relatively non-toxic to people with few environmental side effects are sometimes called "biorational" pesticides. These fit well into an integrated pest management strategy, which relies on monitoring for early detection of pests and emphasizes the use of selective
