Calving problems and early viability of the calf. A ...

A minor problem may be created by assisting a heifer too early, but if one waits too long, any problem will be a major one.

Calving problems are most common in heifers giving birth to their first calves. Only about 3 percent of mature cows have any trouble, but for heifers the figure may be 50 percent or more. ...

...

With the calving season only 10 weeks away for most spring-calving herds - who plan to calve down on February 1 - the importance of having cows in good condition is critical. Drying off cows early, particularly those that are thin or first-time calvers, should be a priority.

Hitting BCS targets crucial over the dry period to ...

Some cows have a short cycle in their first heat after calving.
