Published in 1989 by Prentice-Hall, this book is a useful resource for educators and self-learners alike. The text is aimed at those who have seen Maxwell's equations in integral and differential form and who have been exposed to some integral theorems and differential operators. A hypertext version of this textbook can be found here. An accompanying set of video demonstrations is available below.

In physics, electromagnetic radiation (EM radiation or EMR) refers to the waves (or their quanta, photons) of the electromagnetic field, propagating (radiating) through space, carrying electromagnetic radiant energy. It includes radio waves, microwaves, infrared, (visible) light, ultraviolet, X-rays, and gamma rays.

an electromagnetic wave encounters the boundary between two different regions, such as air 1 Technically, all waves carry momentum, but this momentum is suppressed by a factor of  $v=c$ , where  $v$  is the speed of the wave and  $c$  is the speed of light. This follows from the relativity fact that energy is equivalent

Electric and magnetic fields together are referred to as electromagnetic fields, or EMFs. The electric and magnetic forces in EMFs are caused by electromagnetic radiation. There are two main categories of EMFs: Higher-frequency EMFs, which include x-rays and gamma rays.

[Chapter 35. Electromagnetic Fields and Waves](#)

In this book, a variety of topics related to electromagnetic fields and waves are extensively discussed. The topics encompass the physics of electromagnetic waves, their interactions with different kinds of media, and their applications and effects.

The properties of electromagnetic fields and waves are most commonly discussed in terms of the electric field  $E(r,t)$  and the magnetic induction field  $B(r,t)$ . The vector  $r$  denotes the location in space where the fields are evaluated.

Wavelength and frequency determine another important characteristic of electromagnetic fields: Electromagnetic waves are carried by particles called quanta. Quanta of higher frequency (shorter wavelength) waves carry more energy than lower frequency (longer wavelength) fields.

[Radio Waves & Electromagnetic Fields - PhET](#)

An electromagnetic field (also EMF or EM field) is a magnetic field produced by moving electrically charged objects. It affects the behavior of non-moving charged objects at any distance of the field. The electromagnetic field extends indefinitely throughout space and describes the electromagnetic interaction.

6 Electromagnetic Fields and Waves James Clerk Maxwell's unification of electromagnetic phenomena, published in 1865, is perhaps the best example of a successful modern scientific theory [Maxwell, 1998].
