Elementary differential geometry is centered around problems of curves and surfaces in three dimensional euclidean space. We're using Barret Oneil's excellent text this semester. Oneil uses linear algebra and differential forms throughout his text. I am excited about learning the method of moving frames for surfaces in 3-space.

Publisher Summary. This chapter focuses on the geometry of curves in \mathbb{R}^3 because the basic method used to investigate curves has proved effective throughout the study of differential geometry. A curve in \mathbb{R}^3 is studied by assigning at each point a certain frame—that is, set of three orthogonal unit vectors. The rate of change of these vectors along the curve is then expressed in terms of the ...

Elementary Differential Geometry presents the main results in the differential geometry of curves and surfaces suitable for a first course on the subject. Prerequisites are kept to an absolute minimum - nothing beyond first courses in linear algebra and multivariable calculus - and the most direct and straightforward approach is used throughout.
