Types of Epilepsy Syndromes | Epilepsy Foundation

In terms of epilepsy classification, the clinician starts by classifying the type of seizure. This is the subject of the companion paper on the new classification of seizure types.10 Then, the patient's type of epilepsy needs to be clas-sified and, in many cases,a specific epilepsy syndrome diag-nosis can be made.

What is a syndrome? A syndrome is a group of signs and symptoms that, added together, suggest a particular medical condition. In epilepsy, examples of these signs and symptoms would be things like the age at which seizures begin, the type of seizures, whether the child is male or female and whether they experience difficulties with learning.

Syndromes | Epilepsy Action

> Epilepsy Syndromes. What is a Syndrome? ... A diagnosis of a particular epilepsy syndrome is useful in deciding the possible treatment options, what course the condition may take, and the possible genetic risk of passing it on to offspring. Some types of epilepsy syndromes are:

ILAE classification of the epilepsies: Position paper of ...

Epilepsy has no identifiable cause in about half the people with the condition. In the other half, the condition may be traced to various factors, including: Genetic influence. Some types of epilepsy, which are categorized by the type of seizure you experience or the part of the brain that is affected, run in families.

Delineation of epilepsy syndromes with CSWS still remains unclear, since clinical manifestations are characterized by a variable deterioration or impairment of neuropsychological and/or motor abilities associated with sparse and sometimes no epileptic seizures. Hence, different types of epilepsy syndromes have been defined (Tassinari et al., 2000).
