~~Konrad Lorenz, Classical Ethology, and Imprinting~~

Ethology is a branch of biology that focuses on animal behavior. It originated in European zoology in the 1930s and revolved around the study of instinctive and fixed-action patterns of behavior. Ethologists study the animal's behavior in its natural environment rather than in a laboratory. Ethology paved the way for comparative psychology.

~~Ethology — IRsearchNet~~

Ethology, the study of animal behaviour. Although many naturalists have studied aspects of animal behaviour through the centuries, the modern science of ethology is usually considered to have arisen as a discrete discipline with the work in the 1920s of biologists Nikolaas Tinbergen of the Netherlands and Konrad Lorenz of Austria. Ethology is a combination of laboratory and field science, with ...

differences between it and comparative psychology.

~~Ethology Majors—Learn.org~~

Human ethology is the study of human behavior. Ethology as a discipline is generally thought of as a sub-category of biology, though psychological theories have been developed based on ethological ideas (e.g. sociobiology, evolutionary psychology, attachment theory, and theories about human universals such as gender differences, incest avoidance, mourning, hierarchy and pursuit of possession).
