The data will look like an EKG showing the heart beat. Whenever a planet passes in front of its parent star as viewed from the spacecraft, a tiny pulse or beat is produced. From the repeated beats, we can detect and verify the existence of Earth-size planets and learn about the orbit and size of the planet. Video credit: NASA Ames and Dana Berry

On Oct. 8, 2020, with COVID-19 safety protocols in place, team members of the Mars 2020 Perseverance rover mission waited for a reply from the Mars Entry, Descent, and Landing Instrumentation 2 (MEDLI2) suite onboard the spacecraft, which is currently en route to the Red Planet. MEDLI2 is a collection of sensors that will measure aerothermal environments and thermal protection system material ...

News | Sensors on Mars 2020 Spacecraft Answer Long ...
Titan has a dense, nitrogen-rich atmosphere, but if the temperature were raised by only a few degrees, it would all escape. And the atmosphere of Io, Jupiter's volcanic satellite, is excessively tenuous; the density corresponds to what would normally be called an excellent laboratory vacuum. Life on Io is improbable to the highest degree.

On average, about 60 of Earth's 550 historically active volcanoes are in eruption each year. In 2004 alone, over 160 earthquakes were magnitude 6.0 or above, some of which caused casualties and substantial damage. This map [This Dynamic Planet] shows many of the features that have shaped--and continue to change--our dynamic planet.

EarthSpace Science is a laboratory course focusing on the study of space, geologic structures and forces, the waters on our planet, and the atmospheric forces that shape our world. Through experimentation and investigation, students will explore the earth cycles including the geosphere, hydrosphere, cryosphere, atmosphere, and the carbon cycle.

Earth Space Science (lab)/Earth Space Science Honors (lab ...
In evolutionary biology, abiogenesis, or informally the origin of life (OoL), is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but an evolutionary process of ...
