The "Teacher's Answer Key: Evaluating experiments worksheet" resource attached to this section can be used as students work on providing the basic information (independent and dependent variables, hypothesis, etc.) for each scenario, but I think it is most useful here as a way to guide the discussion of how the experiments could be improved.

Ninth grade Lesson Evaluating Existing Experimental Designs

Fundamentals of Experimental Design 3 Read This! When designing an experiment, you need to consider three types of variables. The independent variable is changed by the experimenter by design. This variable is sometimes called the "manipulated variable." The dependent variable is what changes as a result of the change in the independent ...

pendent variable. This variable is sometimes called the "responding variable." In some cases more than one dependent variable is considered. The third category of variables is controlled variables. These are variables that you think may change the outcome of the experiment, but since they are not being studied,
