Microsoft System Center MP for SQL Server 2008 Replication

Hi, I have a requirement to replicate the data between 2 database servers. I have one server (S1) and 2 database (D1,D2) on a machine. S1 ---> D1 (Database 1)

Amazon.com: Customer reviews: Pro SQL Server 2008 Replication

Pro SQL Server 2008 Replication is for Microsoft database developers and administrators who want to learn about the different types of replication and those best suited to SQL Server 2008. This book will also cover advanced topics like replication with heterogeneous databases, backup and recovery of replicated databases, database mirroring with replication, log shipping with replication, troubleshooting, plus optimization and tuning.

Pro SQL Server 2008 Replication Expert's Voice in SQL ...

Go into SQL management Studio, right click on the server and choose properties. Set the Max Text Replication Size to something higher. Or do what I did and use the max value of 2147483647. TIP 5: I found a good reference book that just focuses on SQL replication called "Pro SQL Server 2008 Replication" (ISBN13: 9781430218074).

Pro SQL Server 2008 Replication by Sujoy Paul, Paperback ...

Pro SQL Server 2008 Replication is for Microsoft database developers and administrators who want to learn about the different types of replication and those best suited to SQL Server 2008. This book will also cover advanced topics like replication with heterogeneous databases, backup and recovery of replicated databases, database mirroring with replication, log shipping with replication, troubleshooting, plus optimization and tuning.

Configure Data Replication in SQL Server 2008 R2

I'm trying to replicate a rather large database from SQLServer 2000 to SQLServer 2008, located on two different servers. I found an article about attempting this and have been trying to follow its direction. Here is the article. Mixed Mode Bi-Directional Transactional Replication between SQL 2000 and SQL 2008. Here is the part I'm stuck on:

Gnwgnus Realm: SQL 2008 Transactional Replication and ...

Microsoft SQL Server provides the following types of replication for use in distributed applications: Type Description; Transactional replication: Changes at the Publisher are delivered to the Subscriber as they occur (in near real time). The data changes are applied to the Subscriber in the same order and within the same transaction boundaries ...

replication error in SQL SERVER 2008

Replication is one of the High Availability features available in SQL Server. Transactional Replication is used when DML or DDL schema changes performed on an object of a database on one server needs to be reflected on the database residing on another server. This change happens almost in real time (i.e. within seconds). In this article, I will demonstrate the step by step approach to configuring transactional replication in SQL Server 2008 R2.
