Existing spasticity can be worsened by external factors such as constipation, urinary tract infections or pressure ulcers.

Spasticity Management Course - A Multidisciplinary ...

Definition. 'Spasticity is a motor disorder characterised by a velocity-dependent increase in tonic stretch reflexes (muscle tone) with exaggerated tendon jerks, resulting from hyperexcitability of the stretch reflex, as one component of the upper motor neurone syndrome.'

Spasticity management : a practical multidisciplinary ...

Spasticity and spasms are caused by an increase in muscle tone. Muscle tone is the level of tension or resistance to movement in a muscle. It is what enables you to move your limbs or hold a position. For instance, to bend your arm, you must shorten or tighten the biceps muscle at the front of the arm...
